A. Repetitive rating; pulse width limited by max. junction temperature.

B. P_d is based on max. junction temperature, using junction-case thermal resistance.

C. The value of R_{GJA} is measured with the device mounted on the minimum recommend pad size, in the still air environment with $T_A = 25^\circ\text{C}$.

The maximum allowed junction temperature of 150°C. The value in any given application depends on the user's specific board design.
